Dr.WEB®

for Internet Gateways Kerio

Dr.Web for Internet Gateways Kerio is an anti-virus plugin connected to Kerio Firewall. The plugin is installed onto a computer running the firewall and is then used by that computer as an external anti-virus.

Advantages

- Reliable protection of Internet connections for home users and businesses of any type and size;
- Easy administration – receive notifications on all virus events via e-mail or short messages;
- Minimal message delivery time is achieved through multi-thread scanning.

Key features

- Detection of malicious objects transferred with HTTP, FTP, SMTP, POP3 and Kerio Clientless SSL VPN traffic;
- Detection of infected e-mail attachments before they are processed by a mail server;
- Customizable list of data transfer protocols for scanning;
- Adjustable scanning parameters: maximum size and types of objects to be scanned, actions to be performed with infected objects;
- Actions undertaken to neutralize a threat are performed according to Kerio settings;
- Enabling/disabling detection of selected types of malicious programs;
- Logging errors and events in the Event Log and in the text log; the log contains information about module parameters, notifications about viruses detected in each infected message;
- Automatic updating of virus databases.

System requirements

- At least 40 MB of free disk space
- Microsoft® Windows 2000/XP/2003/2008/7
- Kerio Firewall 6 or later

Licensing

Types of licenses

- Per number of protected users.
- Per server license – unlimited scanning of server traffic for as many as 3,000 protected users.

Dr.Web for Internet Gateways Kerio can be purchased as a separate product or as a component of Dr.Web Enterprise Security Suite.

License options

- Anti-virus
- Anti-virus + Control center

Dr.Web for Internet Gateways Kerio is also available in Dr.Web bundles for small and medium companies.
