Dr.Web Enterprise Security Suite

https://drweb.com

- Centralised end-point security for any device located within the information infrastructure of government organisations and enterprises. And within commercial companies — including protection for employee home PCs and personal mobile devices.

- Meets the high security regulatory standards of Personal Data Information Systems (PDIS) up to and including the class I level of security, state information systems up to and including the class I level of security, and processing systems for data containing state secrets.

- Compliance with trust level requirements — trust level 2 and full compliance with regulatory legal acts concerning the creation and certification of information security solutions.

- Licenses and certificates issued by FSTEC Russia, the Ministry of Defense of the Russian Federation, and the Federal Security Service (FSB).

Dr.Web protects:

workstations

file servers

email and SMTP-gateways

Internet gateways

mobile devices

Defend what you create

Dr.WEB®
Made in Russia

Dr.Web Enterprise Security Suite

Centralised protection for all corporate network hosts

Dr.WEB®
Enterprise Security Suite

Comprehensive protection for all corporate network hosts

Dr.Web Enterprise Security Suite consists of a single control center for managing network security as well as components that protect all of a corporate network's hosts and services. Dr.Web Enterprise Security Suite provides reliable protection from most existing threats.

Versatility

Depending on what solution the customer chooses, a single Dr.Web key file is created to protect all the customer's objects of interest. The key includes Dr.Web software products that protect various objects for all the OSs and platforms of the product that are supported by Dr.Web. If, for example, you need to migrate from Unix to Windows while your license is valid, you don't have to obtain a new key. Simply download the distribution for your new OS from www.drweb.com free of charge.
